New National Phase Application of Kenichi ITO et al.

IN THE ABSTRACT:

Please amend the abstract as follows:

An X-ray detector comprising \underline{a} scintillation layer (38) separated by a partition (39) for each pixel and a photodiode (13) for converting fluorescent light, which is converted by the sciltillation layer (38), into \underline{a} signal charge, wherein when an average particle diameter of phosphor particles forming the scintillation layer (38) is Ds and an average particle diameter forming the partition (39) is Dw, Ds>Dw is satisfied.
